INVOICE APP — USER MANUAL

Invoice & Client Management Desktop Application in Python / Tkinter

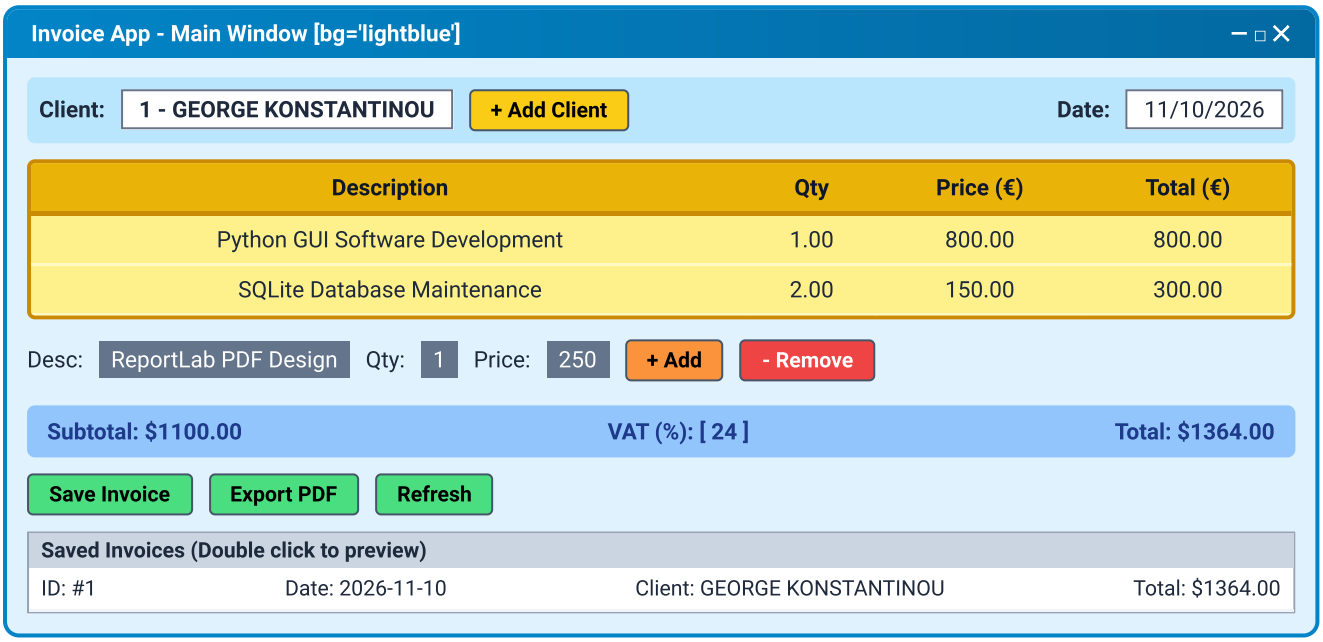

Author: George Kostopoulos
Version v1.0

1. APPLICATION OVERVIEW & TECHNOLOGIES

The **Invoice App** is a standalone desktop application (Desktop GUI) developed in **Python**. It provides a user-friendly and colorful interface for client management, automated invoice generation, VAT calculation (24%), and direct export to printable PDF documents.

2. MAIN APPLICATION INTERFACE

Interface snapshot during active invoice creation:

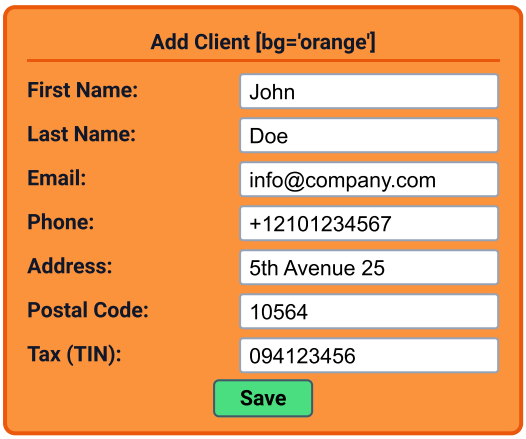

Key Interface Features:

- **Client Selection & Calendar:** Fast client selection and date picker using `tkcalendar`.
- **Yellow Treeview Table:** Dynamic item preview table with automated total calculation.
- **SQLite3 Integration:** Automatic persistent storage in `invoice.db`.

3. WINDOW FEATURES & INTERFACE SCREENSHOTS

A. Add Client Window (`Add Client`)

Clicking **+ Add Client** opens the client registration form.

** Tax ID uniqueness check (`tax_exists`) prevents duplicate entries.*

B. Invoice Preview Window (`Preview`)

Double-clicking a saved invoice opens the detailed preview window.

4. GENERATED PDF DOCUMENT SAMPLE (EXPORT PDF)

When clicking **Export PDF**, ReportLab generates the clean printable document:

INVOICE #1
Date: 2026-11-10

Client: GEORGE KONSTANTINOU
Tax ID (TIN): 094123456

Description	Qty	Price	Total
Python GUI Software Development	1	800.00	800.00
SQLite Database Maintenance	2	150.00	300.00

Subtotal:	$1100.00
VAT (24%):	$264.00
Total:	**$1364.00**

5. DATABASE STRUCTURE (`INVOICE.DB`)

The application manages 3 tables in the SQLite database automatically:

- **`clients`:** Stores first & last name, phone, email, address, postal code, and unique Tax ID (TIN).
- **`invoices`:** Stores invoice ID, date, client ID, subtotal, VAT amount, and grand total.
- **`items`:** Stores individual products/services linked to their corresponding invoice ID.
